

# VOICE

An app that helps world  
citizens to share their voice

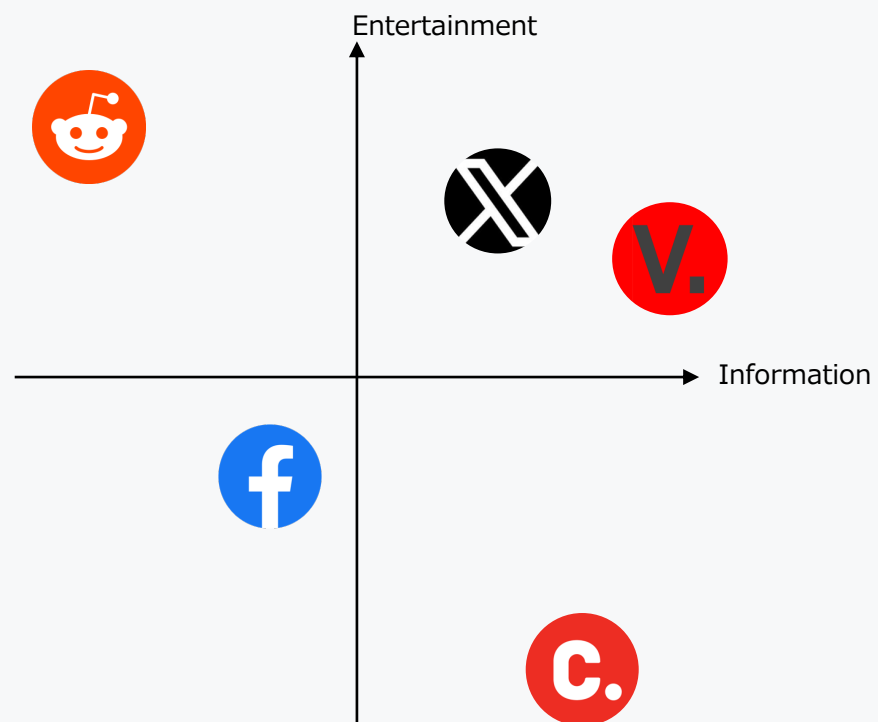

# The Main Idea

The main Goal is to enhance information and create an active information source where users can vote read and share their feelings

It will work like Instagram, you can read posts from real journalists and reporters, under those posts you can vote, discuss and be redirected towards the main article

# Our competitors

Voice is a social network with no algorithm, you can decide the topic, but all the content is official and against fake news

X is a social network Based on your attention, you can decide the topic, but all the content is made from users and with no particular focus on topics

## Voice vs X

# Voice vs Facebook

The content visibility of voice is determined by community engagement rather than predictive analytics.

This approach focus on a a democratic space where authenticity is key

Facebook employs sophisticated algorithms

It is a platform where content is user generated with a wide range of subjects from personal updates to global news.

# Voice vs Reddit

Focused on transparency,  
Voice links content with  
real identities.

Its voting system relies on  
verified users, promoting  
credibility and accuracy in  
shared information.

A network that supports  
anonymity.

with a voting system that  
democratically elevates  
content based on user  
interest.

# Voice vs Change.org

A social platform where verified users share information and vote to signal trust in content, emphasizing authenticity and accuracy.

A petition platform where people rally support for causes, using signatures to demand change, independent of user identity verification.
